Production procedure:

Sample , Patterns and design department: The department is equipped with CAD systems and 10 sewing machines to produce samples according to buyer's specifications or our own designs. From digitized patterns all production makers are produced with optimum efficiency.

Quality department: The factory has the best quality inspection centre where comprehensive QC. Measures have been integrated in all production procedure to minimize any manufacturing defects. In addition, we ensure that all fabrics and raw materials are source from reliable and quality approved suppliers. Quality is ensured in 7 point check (JC Penny standard) system of production. QA department conducts inspection of fabrics .cutting moulding bundle preparation and 100% garment quality inspection and recording at all stages of production.

Cutting department: This department is equipped with fabrics inspection, band knife and lace pilling. Prepares bundle baskets and sends the bundle to sewing department. Before cutting 100% of the fabrics are inspected and laid out to allow sufficient time on cutting tables for relaxation.

Sewing Department: Sewing department is equipped with modern apparel machinery and attachments. The mechanical department is fully equipped with specialized attachment making facilities. The lines are laid out in a manner to allow 100% inspection of the garments during production.

Finishing Department: Once completed the garments are inspected in size lots. All packaging accessories are added and each piece of garments is checked with needle detector in the metal control zone before packing for shipment. For all orders internal AQL is determined before buyer's /agent's inspection.

Sequence of operation for each Garments product:

- Order Collection
- Produce development sample
- Produce pre production sample
- Sample approved
- Pattern making
- Marker making
